

Spring Design Releases Free Version of ScreenShare® Browser, the First Free App that Lets Non-Cellular Android Tablets Access Internet and Phone Content On the Road

*ScreenShare Browser Now Available on the Google Play Store;
Suite of Apps and a PC Version Planned for Mid-2013*

FREMONT, CA – March 19, 2013 – ScreenShare Browser, a new Android app, lets Android phone users share the content from their phone's browser with the larger screen of their Android tablet without requiring a cellular account on the tablet., ScreenShare Browser developed by Spring Design, was previously in beta and is now available for free on the Google Play Store..

Connect via the Smartphone/ Interact on the Tablet

ScreenShare Browser can sync a phone's browser user interface with a tablet instantly, enabling content to move fast and seamlessly between phone and tablet via a Bluetooth or Wi-Fi connection, and using the smartphone's cellular connection or Wi-Fi to access the Internet. Once connected, users can interact with the ScreenShare-enabled content on the tablet, just as they would on their smartphone, giving them full use of the tablet's virtual keyboard, and enabling reading/sending email, viewing web video, and zooming and panning web-based images on the tablet. It is similar to wireless mirroring image technology used in other products but ScreenShare allows two-way interactions. Content can even be split between the two, such as viewing a YouTube-based video full screen on the tablet while reading comments about the video on the phone.

"Responding to strong user demand and feedback, we are now offering a free version of the ScreenShare Browser app with the same interface as our paid version to aggressively promote our two-way mirroring and interaction concept. Research shows that very few tablets have a cellular account. We are dedicated to making it easier for both business and personal users to present, use and share web-based content on their phones and tablets, even if their tablet doesn't have a cellular connection," said Spring Design CEO, Albert Teng.

More Features, Apps and PC Version Planned

Spring Design plans to expand its features to include SD-based content and is on track to deliver a suite of ScreenShare apps in June to facilitate screen sharing of the phone's local storage-based content including photos, music, video and documents. Spring Design will also add PC support to its ScreenShare Browser app in July enabling PCs and laptops to enjoy the same functions as the tablet to work with an Android phone."

The free version of ScreenShare Browser may feature some advertising. The Pro version of ScreenShare Browser has no advertising and is available now at a new discounted price \$.99 on Google Play to aggressively promote the two-way mirroring/interaction concept. The tablet sister app is free. Spring Design plans to release a suite of apps in June to facilitate screen sharing content residing on a phone's SD card with a tablet. PC porting is underway with the scheduled release date in July 2013.

Find the free browser version with the product name, ScreenShare (phone) that pairs with its free tablet sister app: the free version ScreenShare (Tablet) on Google Play.
